Address

Cebu City, Philippines

Education

2020 - 2023

High School

University of San Jose-Recoletos

2012 - 2016

Senior High - STEM

University of San Jose-Recoletos

2012 - 2016

Bachelor of Science in Computer Science

CIT University

Skills

Hard Skills

- Java
- Python
- C++
- MySQL
- Kotlin
- CSS
- JavaScript
- React
- Django

Soft Skills

- Team Player
- Adaptable
- Problem Solver

Jexter Alido

3rd Year BSCS Student at CIT University with a solid foundation in Java, Web Technologies, and Front-end development. A versatile problem-solver with a proven track record in collaborative projects and technical tutoring. Passionate about writing clean, efficient code and eager to apply a diverse technical toolkit to a professional OJT environment. Committed to continuous learning and contributing to the success of a dynamic development team.

Project

○ CineHub - React

A project focused on creating a user-friendly web interface for browsing and managing movies.

- Developed a responsive single-page application using React and Vite to consume and display data from a public movie API.
- Implemented a custom favoriting system with Local Storage persistence to maintain user selections across browser sessions.
- Engineered a clean, modular UI using CSS Modules to ensure scoped styling and a polished, professional aesthetic.

○ Tepok - Godot Engine 4, GDScript

A project focused on building a highly customizable and accessible game configuration interface.

- Developed a dynamic settings menu featuring real-time sensitivity scaling and multi-channel audio mixing using Godot's UI system.
- Designed and implemented responsive UI components to provide instant visual feedback for audio levels and mouse/controller sensitivity.

○ WildQueue - Java, MySQL

A project focused on transforming manual queuing into a streamlined, digital campus experience.

- Developed a responsive Object-Oriented web interface to modernize the traditional student and administrative queuing process.
- Engineered a dynamic digital concierge system featuring specialized views for Admin, Student, and Teller roles.

○ AniVibe - Kotlin

A dedicated mobile application for anime enthusiasts, providing a streamlined platform to browse, track, and discover anime series through a high-performance mobile interface.

- Developed a responsive and fluid mobile user interface using Kotlin and Jetpack Compose to ensure a modern, native Android experience.
- Integrated a third-party Anime API to provide real-time updates on seasonal shows, synopses, and user ratings.
- Engineered a custom local database using Room to allow users to save favorites and track their watch progress offline.

○ BankRap E-Wallet - Python, Django

A functional peer-to-peer micro-lending platform designed to bridge the gap between student borrowers and individual lenders through a secure digital ecosystem.

- Integrated MySQL database schemas to handle complex relationships between borrowers, lenders, and real-time credit scoring.

Additional Information

- **Certification :** CodeChum OOP, SoloLearn (Python), Canva UI/UX
- **Awards/Activities:** 1st Runner up - UPCSG Komsai Week 2026 GameJam
